

1. The first part of the paper discusses the importance of understanding the user's needs and requirements before designing a system. It emphasizes the need for thorough research and analysis to ensure that the system meets the user's expectations and provides a good user experience.

2. The second part of the paper describes the design process, from initial concept development to final implementation. It highlights the iterative nature of the design process and the importance of testing and evaluation at each stage.

3. The third part of the paper focuses on the implementation phase, discussing the challenges of deploying a new system and the strategies for ensuring a smooth transition. It also addresses the importance of ongoing support and maintenance to keep the system up-to-date and secure.

4. Finally, the paper concludes by summarizing the key findings and providing recommendations for future research and practice. It stresses the need for a holistic approach to system design, one that considers all aspects of the user experience and the organization's goals.

Year	Total population (%)	Population aged 65 and over (%)
1950	10	10
1960	11	11
1970	12	12
1980	13	13
1990	14	14
